OSCE

For US

for subject specialists

for everyone

Collect all terms, words, actions, descriptions and examples that define open source, circular economy and OSCE work, so that can unify and create a single language.

Invite experts, communities and associations to share what they understand by these themes, how they manage to expose and transmit it in the work they do.

Ask the public in general how they understand this terminology, how they live in their daily life so that it can reach far beyond those who know it.

what does it mean...?
